

# Küba Green Line Just cool.

GEA Heat Exchangers

Suitable for CO<sub>2</sub>

**Küba** **Green Line**  
Aircoolers

## Welcome to the world of GEA Küba!

The range of applications for our Green World line will carry the motto „Just cool.“. When precision of temperature is important, the Küba Green Line is the right choice.

Yesterday, today and tomorrow we continue to **set quality standards worldwide** (p. 8 ➤ Quality). The legendary „GEA Küba evaporator 68“ is the reference Air Cooler with which Air Cooler test rigs have been set up and calibrated since 1968. It provides the basis for the European norm EN 328 and the EUROVENT testing specifications, to which GEA Küba engineers have made significant contributions.

**For GEA Küba, quality means always providing the maximum benefit for our customers. We focus on the best technology for the application, not the technology itself.** Continuously improving our products, internal processes, and production methods are at the heart of understanding who we are.

So that these benefits are also available to refrigeration system operators, we work closely with our partners in refrigeration wholesale and refrigeration system construction. In this way, that which belongs together can come together: Expertise in application, planning and system construction.

To provide orientation for our partners in their selection of the optimum Air Cooler, the product programme is presented by application. With two complete product lines, we offer you the right high performance Air Cooler for highly complex or very simple cooling tasks based on cooling technology for commercial or industrial use.

The Küba Blue Line is the best technical solution for complex refrigeration requirements. The Blue World stands for maximum goods protection, optimum ripening and improvement processes and universal operation, even in challenging conditions.

The Küba Green Line is the right product line for simple cooling applications. By clearly focusing on standardised refrigeration functions, the Küba Green Line combines low investment and operating costs with proven GEA Küba quality.

The *gastro* FM is most at home in cooling counters or food storage units. With our smallest air cooler, every drink becomes a refreshing pleasure.

For small cooling rooms, the *junior* DF is really big – for packaged goods and to cool open goods. From keeping things fresh to freeze storage, its complete hygiene coating means it can be used universally.

The *compact* DF lives up to its name and is a power package in small spaces. In the service station, in catering and retail, it is the space-saving helper for packaged goods in temperature ranges both below and above zero.

Do you have a large refrigerated warehouse or a cooling hall? The *market plus* SP offers outstanding performance and precision for standard refrigeration and deep freezing.

Our *comfort* DP is the delicate touch in the Green World and makes conditions appreciably cool where people are working. Draft-free air circulation and extremely quiet operation make for a pleasant climate for people.

We would like to welcome you on an exciting journey through the „Green World“ of GEA Küba.

Welcome!

Christoph Korinth  
Technical Manager

■ **Reliability**

■ **Quality**

■ **Optimum solutions**

■ **Service and availability**

### GEA Küba stands for reliability:

GEA Küba represents tradition and progress – and **8 decades of dedication to refrigeration technology**. Since 1927, GEA Küba has developed and manufactured its products in Germany, **setting worldwide technological standards with quality „Made in Germany“**.

Specialisation and continuous investment in research and development (R&D) and optimised production processes make this **consistent top performance** possible.

### GEA Küba stands for quality:

Among Air Cooler manufacturers in Europe, GEA Küba has the largest R&D facility, which provides the driving force for technical advancement and innovation **in both individual components as well as entire systems**.

The acid test of the unrivalled functionality and quality of GEA Küba products, however, is their **daily use in thousands of practical applications**.

The result is **maximum safety** in terms of **installation, use and maintenance** as well as in the long-term **value of the investment**.

### GEA Küba stands for optimum solutions:

A consistent focus on our customer's needs is the driving force for our **innovative product solutions**. The measuring stick is always achieving the **maximum customer benefit**, not reaching the ultimate pinnacle of technology.

With the **Küba Blue Line** and the **Küba Green Line**, GEA Küba is the only manufacturer to offer **two complete, comprehensive Air Cooler product lines**.

### GEA Küba stands for service and availability:

Of course, customer focus à la GEA Küba also means offering extensive technical and **sales-oriented service**. Above all, this includes **ease and accuracy in selecting** products, accessories and spare parts.

An extensively stocked warehouse at the Baierbrunn site near Munich guarantees **rapid availability** (24 hour delivery) and provides additional **reliability for operation, planning and scheduling**.

**The Küba HFE® tube / fin system for maximum energy efficiency**

Extensive, ground-breaking research and innovative testing methods have led to the development of a tube / fin system that offers the optimum combination of maximum heat transfer with minimum loss of pressure.

- Optimised k-value allows for **high refrigeration capacity**
- Fan requires **low energy input** due to low air resistance
- **Minimal frost build-up** makes long operating periods possible
- **The units are compact**, with high capacity

**The Küba CAL® distributor for superior refrigerant distribution**

GEA Küba Air Coolers for direct expansion with multiple injection are equipped with the patented Küba CAL® distributor.

- **A consistent performer across the entire application spectrum**, the Küba CAL® distributor always works at the highest capacity
- **Complete, consistent refrigerating capacity** regardless of refrigerant and ambient temperature
- **Maximum energy efficiency even in partial-load operation**, thanks to even refrigerant distribution
- **Universal flexibility** from -55°C to +40°C

**Exceptional defrosting for every application**

According to the refrigeration plant concept, any of the established defrosting methods can be used. For brine and hot gas defrosting, the tube circuitry is adapted to fit the specific application. For electric defrosting, expanded heater tubes provide the best connection to the fin. In our defrosting processes there is:

- **Energy transfer with almost no loss**
- **Shorter defrosting periods** due to a lower final defrosting temperature in the heat exchanger
- **Minimal vapour build-up** because of the low surface temperature on the heater tube (< 95°C)

**Best material selection and processing**

GEA Küba Air Coolers have lasting corrosion protection and are not overly sensitive to cleaning procedures, thanks to their scratch-resistant surface.

- We use the **best materials and high-quality components** for each application, because high quality products begin with the purchase of top quality materials.
- **Perfect surface finish**, with a food safe, non-polluting powder coating that is applied before assembly; corrosion protection even for inaccessible components

## Highly cost-effective

Choosing GEA Küba Air Coolers is the right decision for ecologically and economically oriented investors.

- Because our components are fine-tuned to coordinate precisely with one another, GEA Küba Air Coolers are highly efficient. We take advantage of all energy saving potential for sustainable **reductions in operating costs**
- Selecting the best materials and high-quality processing are the basis for a **long service life** and provide the **best protection for your investment**

## Maximum goods protection

All GEA Küba Air Coolers rely on GEA Küba quality to offer the maximum goods protection for the respective refrigeration application.

- Absolute security in maintaining the temperature of the goods and the room
- **Minimal dehumidification** of sensitive cooled goods so that "Freshness lasts longer"
- **Perfectly adjusted air distribution** – from a powerful air flow to gentle cooling

## Hygienic and operational safety

When you're dealing with food, hygiene is essential, as well as required according to the HACCP guidelines.

- Our material selection and surface finishes (i.e. our powder coating) **meet the requirements of food and consumer product legislation**
- **It's simple to clean GEA Küba products. Hinge-down drip trays are standard; hinged fans are available upon request**
- **Long-lasting corrosion protection** facilitates hygiene in the cold storage room

## Optimum installation and maintenance

The design of GEA Küba Air Coolers places great emphasis on quick and easy assembly and maintenance.

- All significant component groups are **easily accessible**
- **Injuries are prevented** by our powder coating as well as our smooth edge design
- The smaller Air Coolers **can be installed right out of the package by just one technician**

---------------------------------------------------------------------------------------------------------------------------------	--	--	--

**Application Benefits for Contractors and Operators**

**gastro FM: compatible with every counter and cabinet**

**FMA lateral air outlet**

- For easy cleaning, the side panels and the air outlet grids can be removed and replaced without tools

**FMA air outlet top**

- For easy cleaning, the side panels and the air outlet grids can be removed and replaced without tools

**Best airflow**

- Optimal airflow through Küba air guide, patented with the FMA + FMOA
  - wider distribution
  - enhanced air circulation
  - faster cooling of goods

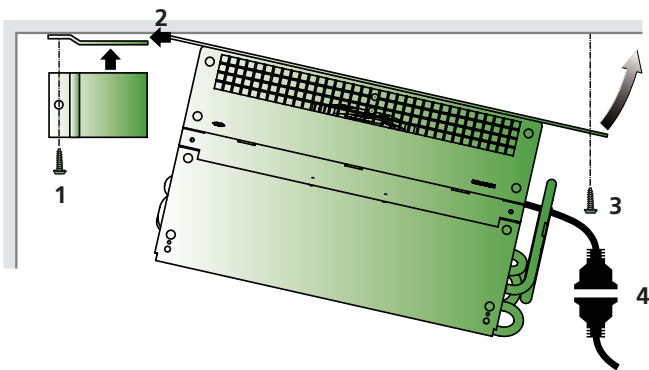

**Extreme applications**

- With the flexible Küba heater, the TAS can be retrofitted
- Tubular radiator can be fitted
- Fans IP 54

**Application Benefits for Contractors and Operators, Nomenclature**

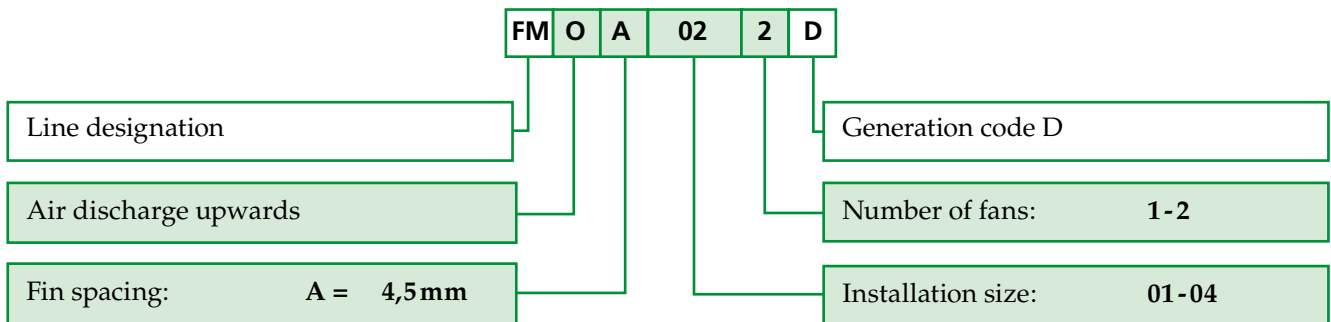

**Straightforward mounting**

- **Mounting brackets are included** to allow for improved assembly for hard to access counter refrigerators.
- **Plug connections IP54 fans are attached externally** to the air cooler  
- No additional wiring required

**Nomenclature**

Standard

**Construction**

**1. Casing**

- Aluminium, smooth
- High-quality powder coating, papyrus white RAL 9018
  - Food-safe
  - Easy to clean
  - Best corrosion protection
- Removeable side panels
- All components are dishwasher-safe
- FMA discharges air from either side through the air guiding grille
  - can be converted to discharge air through one side, using a supplied cover plate
- FMOA discharges air upwards through both sides
  - can be converted to discharge air through one side, using a pluggable gill-shaped air guidance system

**2. Heat exchanger**

- Fin spacing: 4,5 mm
- Tubing Cu-Special, Fins Al, End plates Al
- Fully powder coated (hygienic paint)

**3. Fans CE**

- High-efficiency motors with ball bearing (approx. 30% lower power consumption than with predecessor model FM, FMOA.C), and plugs IP 54
- In acc. with VDE/CE
- Application range: RT -20 °C to +45 °C
- 230V±10%, 50/60 Hz
- Index of protection IP54 (motor and plugs)
- Insulation class B
- 3m cable with plug connections
- Operating values are the values of the built-in motor at +20 °C, with an unobstructed air flow and a dry surface, as required for refrigeration load calculation
- Motor label data = max. allowable value at  $t_{Um\ddot{g}}$  +40 °C, with an unobstructed air flow

Construction

1. Casing

- Aluminium, Sendzimir zinc-plated steel, smooth
- High-quality powder coating, papyrus white RAL 9018
  - Food-safe
  - Easy to clean
  - Best corrosion protection
- Double drip tray
- Drip tray can be folded down and unclipped
- Height of *junior DF*. only 180 mm (incl. drain)

2. Heat exchanger

- Internal cleanliness acc. to DIN 8964
- Fin spacing: DFA.D: 4,5 mm, DFB.D: 7,0 mm
- Tubing Cu-Special, fins Al, end plates Al
- Completely powder-coated (hygienic paint)

3. Fans

- Fans are wired up to a terminal box
- With built-in protector according to VDE provisions
- Application range: DF.D: RT -30°C to +40°C
- 230 V ±10 % V-1
- Index of protection IP42
- Insulation class B
- Operating values are the values of the built-in motor at +20 °C, with an unobstructed air flow and a dry surface, as required for refrigeration load calculation
- Motor label data = max. allowable value at  $t_{Um\ddot{a}} +40^\circ\text{C}$ , with an unobstructed air flow

- Internal cleanliness acc. to DIN 8964
- Fin spacing: DFA.D: 4,5 mm, DFB.D: 7,0 mm
- Tubing Cu-Special, Fins Al, End plates Al
- DFA.D: Flow distributor, with multiple injection
- DFB.D: Küba-CAL® refrigerant distributor with multiple injection

3. Fans CE

- Fans are pre-wired to an internal terminal box
- Ø 300 mm

- With built-in protector, according to VDE provisions
- Application range: RT: -30 °C to +70 °C
- Voltage 230 V ±10 %, V-1, 50/60 Hz:
  - Ø 300 mm, adjustable
- Index of protection IP44
  - DF.051 - 074D = IP44
- Insulation class F
- Operating values are the values of the built-in motor at +20 °C, with an unobstructed air flow and a dry surface, as required for refrigeration load calculation

Motor label data (max. allowable value +40 °C)

	Ø mm	50 Hz			60 Hz		
		min <sup>-1</sup>	W	A	min <sup>-1</sup>	W	A
DF. 051-074D	300	1400	65	0,30	1500	90	0,40

4. Electric defroster

- Wired-up, ready to connect in terminal box
- To prevent steam build-up and to accomplish heat exchange with almost no loss, the heaters are located in special expanded tube sleeves
- 230 V-1 / 400 V-3-Y

## Versions and Electrical Radiators

### Motor version

- **Version V1.33 – quiet design**

Especially suited for sales areas, etc.

- Reduced air volume flow, VL
- Lower sound power level, Lw (A)
- Fans 230 ± 10% V-1~

### Water/brine circulation

- **Version .V2.05**

With a large number of distributors  
(small pressure drop)

- **Version .V2.06**

With a small number of distributors  
(large pressure drop)

### Connections for brine/water operation

Please use our Küba selection software for configuring the brine Air Coolers. Do not hesitate to contact us if you have any further questions.

For Cooler	Inlet and Outlet	
	.V2.05	.V2.06

DF. 073D	Ø 22	Ø 22
DF. 064D	Ø 22	Ø 22
DF. 074D	Ø 28	Ø 22

### Configuration

- Soldered connection

### Electrical radiator

#### Configuration

- Electrical tubular radiator with CrNi jacket  
Ø 8,5 mm
- Connection impervious to water vapour,  
1,0 mm<sup>2</sup> x 1000 mm acc. to VDE 0700 / part 1
- Aluminium fin
- Sendzimir zinc-plated end, middle and top plates
- Copper tube bush
- Completely powder-coated

For Air Cooler	Model	Nominal power at 230 V		Dimensions		Weight

064D, 074D	DFHR2400	3,75	16,3	210	2400	5,6

### Corrosion protection

- **Version V6.01**

#### Cooler:

Tubing: Cu

Fins: Al „goldlack“ coating

End plates: Al, anti-corrosion paint coating on both sides

#### Casing:

Top Panel: Al or Sendzimir zinc-plated steel, anti-corrosion paint coating on both sides

- **Version V6.04**

#### Cooler:

Tubing: Cu

Fins: Al „goldlack“ coating

End plates: Al

#### Casing:

Top Panel: Al, anti-corrosion paint coating

**Application Benefits for Contractors and Operators**

- ⊗ 250 mm
- ⊗ 300 mm
- ⊗ 400 mm
- ⊗ 500 mm

**Expanded capacity range**

- Up to 52 kW

**Closely spaced capacity settings**

- Due to five different fan sizes

**Quick cleaning**

- Hinge-down drain tray available as an accessory (can be retrofitted)

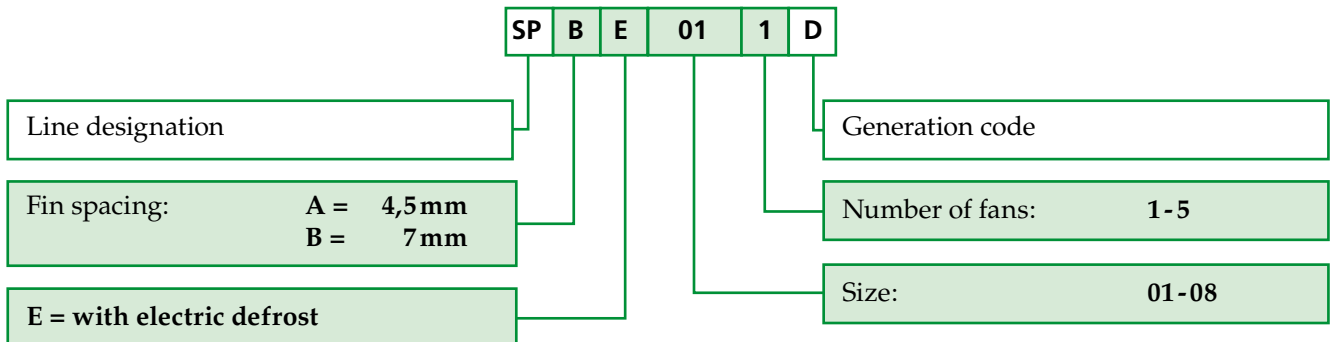

**Increased air throw**

- Küba Air Jet available as an accessory

**Nomenclature**

Standard

**Construction**

**1. Casing**

- Aluminium, smooth
- High-quality powder coating, papyrus white RAL 9018
  - Food-safe
  - Easy to clean
  - Best corrosion protection
- Removable side pieces

**2. Heat exchanger**

- Internal cleanliness acc. to DIN 8964
- Fin spacing: SPA.D: 4,5 mm, SPB.D: 7,0 mm
- Refrigerant distributor:
  - SPA.D: Flow distributor / SPB.D: Küba-CAL®
- Tubing Cu-Special, Fins Al, End plates Al

**3. Fans CE**

- Fans are wired to an internal terminal box:
  - Ø 250 mm / Ø 300 mm / Ø 400 mm
- With built-in protector according to VDE provisions (Ø 500 mm: Led-out protector)
- Application range: RT: -30 °C to +50 °C
- Voltage:
  - SP. 011 – 065D = 230 V ±10 %, V-1 50/60 Hz:
    - Ø 250 mm, non-adjustable; Ø 300 mm, adjustable;
    - Ø 400 mm, adjustable
  - SP. 071 – 084D = 400 V ±10 %, V-3 50/60 Hz:
    - Ø 500 mm, adjustable

• Index of protection

- SP. 011 – 024D = IP42
- SP. 031 – 065D = IP44
- SP. 071 – 084D = IP54

• Insulation class

- SP. 011 – 065D = Insulation class B
- SP. 071 – 084D = Insulation class F

- Operating values are the values of the built-in motor at +20 °C, with an unobstructed air flow and a dry surface, as required for the refrigeration load calculation

**Constructions, Variants and Accessories**

**Water/brine operation**

Please use our Küba selection software for configuring the brine Air Coolers. Do not hesitate to contact us if you have any further questions.

**Configuration**

- Soldered connections
- Ventilation and drainage

**Küba Air Jet**

**Advantages**

- Longer air throw
- Even temperature distribution in the cold room

Loose as accessory

After assembly

**Information:**

Unassembled upon delivery  
(Cannot be used in conjunction with electrical radiator SPHR)

For Model	Air Jet
	Ø mm
SP. 031D-044D	300
SP. 051D-065D	400
SP. 071D-084D	500

**Corrosion protection**

• **Version V6.01**

**Cooler:**

- Tubing: Cu
- Fins: Al „goldlack“ coating
- End plates: Al, anti-corrosion paint coating on both sides

**Casing:**

- Top Panel: Al or Sendzimir zinc-plated steel, anti-corrosion paint coating on both sides

• **Version V6.04**

**Cooler:**

- Tubing: Cu
- Fins: Al „goldlack“ coating
- End plates: Al

**Casing:**

- Top Panel: Al, anti-corrosion paint coating

**Accessories**

**Adapter for textile hose connection**

Advantages of the textile hose operation

- Even cooling without draughts
- Even temperature distribution
- Best possible comfort in workrooms of all kinds

**Information:**

Unassembled upon delivery  
(Cannot be used in conjunction with electrical radiator SPHR)

For Model	Adapter
	Ø mm
SP. 031D-044D	320
SP. 051D-065D	420
SP. 071D-084D	520

**Shut-Up® with Küba Air Jet**

Advantages

- Reduces defrosting time by more than 40%
- With Shut-Up®, the defrosting heat is kept where it should be – in the Air Cooler
- For electrical defrosting and hot gas defrosting

During the cooling phase, fans are switched on:  
Shut-Up® is inflated

For Model	Shut-Up®
	Ø mm
SP. 031D-044D	320
SP. 051D-065D	420
SP. 071D-084D	520

**Information:**

Unassembled upon delivery  
(Cannot be used in conjunction with electrical radiator SPHR)

**Important note:**

Using a textile hose reduces the air volume and performance.

During the defrosting, fans are switched off:  
Shut-Up® locks the Air Cooler

**Important note:**

1. Using a textile hose as well as a Shup-Up® reduces the air volume and performance.
2. Using a textile hose as well as a Shup-Up® requires the use of the Küba AIR JET and an adapter (see above).

## Accessories

### Finned tube heater SPHR

- For Air Coolers with draw-through fans  
– self installation required

#### Note:

Do not operate unless Air Cooler fans are running, to prevent the fans and cold room ceiling from overheating!  
Only use in conjunction with a standard fan guard!

#### Included in delivery:

- Electrical finned tube radiator CrNi steel Ø 28 mm
- Connection ends 1000 mm long
- Al and Nirosta for fastening
- Branching box acc. to VDE, ÖVE, SEV

**Application Benefits for Contractors and Operators**

**Expanded capacity range**

- Up to 28 kW

**Low draught levels**

- Integrated air baffle plate for low air speed in the cooling room
- A low-noise version has been integrated, with standard fans (normal speed „S“, quiet speed „L“)
- Quiet setting in the speed „S“ with accessory (capacitor)

**Space-saving**

- Height 303 mm

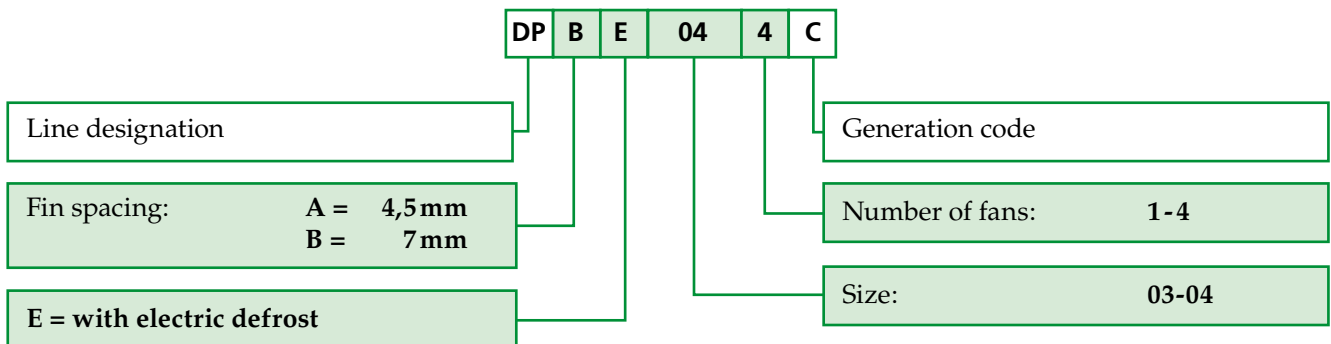

**Best air guidance**

- Integrated air baffle plate
- Low fan speed (up to 0.8 m/s)
- Directs the air along the ceiling of the room, projecting it far into the room

**Nomenclature**

Standard

**Construction**

**1. Casing**

- Sendzimir zinc-plated steel, smooth
- High-quality powder coating, papyrus white RAL 9018
  - Food-safe
  - Easy to clean
  - Best corrosion protection
- Drip tray and side pieces are removable
- Drip tray folds on both sides

**2. Heat exchanger**

- Internal cleanliness acc. to DIN 8964
- Fin spacing: DP.A: 4,5 mm, DP.B: 7,0 mm
- Tubing Cu-Special, Fins Al, End plates Al
- Küba-CAL® refrigerant distributor, with multiple injections

**3. Fans CE**

- Multi-stage fans are wired to an internal terminal box
- Include a built-in protector, without external contacts
- Ø 350 mm
- Plug connection on motor

- Application range: RT: -30 °C to +60 °C
- 230 V 50/60 Hz IP 44 only adjustable via transformer at 50Hz
- Minimum Voltage = 100 V
- Index of protection IP44 acc. to DIN 40050
- Insulation class F
- Operating values are the values of the built-in motor at +20 °C with a dry surface
- Model plate information differs from the specified operating values (see installation instructions)

**Motor label data (max. allowable value +40 °C)**

	Ø mm	50 Hz			60 Hz		
		min <sup>-1</sup>	W	A	min <sup>-1</sup>	W	A
DP. 031-044C	350	1390	140	0,62	1550	195	0,86

**4. Electric defroster**

- Pre-wired, ready to connect in the terminal box
- To prevent steam build-up and to accomplish heat exchange with almost no loss, the heaters are mounted in special expanded tube sleeves
- 230 V-1 / 400 V-3
- With defrost water draining plates

## Versions and Electrical radiators

### Water/brine circulation

- **Version .V2.05** with a large number of distributors (small pressure drop)
- **Version .V2.06** with a small number of distributors (large pressure drop)

### Connections for brine / water operation

Please use our Küba selection software for configuring the brine Air Coolers. Do not hesitate to contact us if you have any further questions.

For Cooler	Inlet and Outlet	
	.V2.05	.V2.06
<b>DP. 031C</b>	Ø 22	Ø 22
<b>DP. 041C</b>	Ø 22	Ø 22
<b>DP. 032C</b>	Ø 28	Ø 22
<b>DP. 042C</b>	Ø 28	Ø 22
<b>DP. 033C</b>	Ø 28	Ø 22

<b>DP. 034C</b>	Ø 28	Ø 28
<b>DP. 044C</b>	Ø 35	Ø 28

### Configuration

- Soldered connections
- Ventilation and drainage

### Insulated drip tray

- **Version .V3.09**

Insulation prevents condensation from forming on the underside of the tray and reduces the transfer of defrosting heat into the cooling rooms.

### Area of application

- Foodstuffs industry, i.e. butchering rooms

### Electrical radiator

#### Configuration

- Electrical tubular radiator with CrNi jacket Ø 8,5 mm
- Connection is impervious to water vapour, 1,0 mm<sup>2</sup> x 1000 mm acc. to VDE 0700 / part 1
- Aluminium fin
- Sendzimir zinc-plated end, middle and top plates
- Copper tube bush
- Completely powder-coated

# Further information

**Sound specifications**

**Introduction**

In the technical design of Air Coolers and condensers, capacity and sound output are defined parameters that must be realised. There are a variety of methods used in the international markets to calculate sound output specifications. Each of these specifications holds a different significance for refrigeration contractors, designers and planners. For heat exchangers and condensers, compliance with specific immission values (i.e. noise level, workplace safety legislation, etc.), is best calculated using sound power usage in the form of acoustic pressure  $L_p(A)$ . However, for Air Coolers, information regarding sound power  $L_{W(A)}$  is most suitable.

**Acoustic pressure  $L_p$**

Pressure = force / surface [N/m<sup>2</sup>]  
 Alternating pressure generated by acoustic oscillation through the medium (i.e. air)

- **Advantage:**  
 Measurement can be directly determined  
 Thermal analogy: temperature measurement
- **Disadvantages:**  
 Independent of environmental influences, of distance to the sound source and of the reference surface used.

**Acoustic power  $L_w$**

is the sound energy radiated per time unit in [W] = [Nm/s]

- **Advantages:**  
 Independent of environmental influences, of distance to the sound source or on the reference surface used
- **Disadvantage:**  
 Cannot be measured directly

**Sound intensity and A-evaluation**

The human ear can perceive sound at frequencies between approx. 15 and 20,000 Hertz. Perception or sensitivity to sound depends strongly on the respective frequency. Very high and low tones are often perceived as less loud than those in the mid-frequency range from about 1000 to 5000 Hertz. For this reason, evaluation filters in accordance to EN 61 672-1 are used. In audio technology and in the environmental field, the A-evaluation is most significant because, for certain sound intensities, it has frequency behavior similar to that of the human ear.

**Sound output specifications for Air Coolers**

Due to the reflection in the cold storage area, the sound power  $L_{W(A)}$  should always be used for a technical comparison between Air Coolers. In this case, only sound power offers information that can be compared because it does not depend on the distance to the sound source, the installation location or the surroundings.

**Sound power**

**Addition of sound sources at the same level**

**Correction of sound level by change of fan speed**

**Assembly**

**Suction line** (not to be used with brine operation) ①

If the suction line cannot be laid on an incline to the evaporator, an oil collector should be installed. The high speed of the refrigerant in the bend will ensure that oil is recirculated to the compressor. The bend should be located below the cooler so that the air cooler capacity is not affected by oil collecting in the Air Cooler.

**Condensation water line** ②

The condensation water line must always be laid at an incline great enough to ensure that the water can flow out. In cold storage areas with an ambient temperature below 4°C, plan to use trace heating to prevent the condensation water from freezing in the line.

**Trap** ③

Installing a trap is required for trouble-free operation and not just from an energy perspective. If an Air Cooler is operated without a trap, „warm air“ with high temperatures and humidity is drawn in from outside the Cold Room. This „warm air“ significantly reduces the Air Cooler capacity, and can, depending on temperature level, lead to ice formation and total failure of the system. The trap should always be installed outside of the Cold Room. Each cooler should have it's own trap to prevent the risk of interaction.

**Wall clearance** ④

Maintain a sufficient wall clearance to ensure optimum Air Cooler air flow rates. No tubes, etc. should pass through this minimum clearance area. In some circumstances this can lead to uneven frost build-up and loss of capacity. The recommended clearance always includes a free intake area.

**Side clearance** ⑤

Side clearance should be selected such that service work can be carried out. This, together with the wall clearance ④, should be equal to at least the area of the air inlet. This ensures a 100% air flow rate and full cooling capacity.
